SILICON LOW CURRENT
SCHOTTKY BARRIER DIODE

JEDEC DO-35 CASE

DESCRIPTION

The CENTRAL SEMICONDUCTOR 1N6263 is a Silicon Schottky Barrier Diode designed for low current, fast switching applications. This series is an ideal candidate to replace germanium switching diodes and conventional silicon switching diodes where ultra fast switching speeds and very low forward voltage drops are required. For higher breakdown voltages contact the factory for information on the CDSH-L Series.
